AURELIO FLOREZ

aurelio@florezdelvalle.com | Miami, FL | aurelioflorez.com | linkedin.com/in/aurelioflorez | github.com/aureliusf

EDUCATION

Miami Dade College | Miami, Florida
Associate's in Computer Science — *August 2021 – December 2024*

Florida International University | Miami, Florida
Bachelor's in Computer Science — *August 2025 – Expected May 2027*

EXPERIENCE

AI & Operations Engineering Intern — *Miami, FL | June 2026 - July 2026*
Melody AV

- Built a natural-language channel to Sage 100 ERP for the C-suite, retiring ~15 recurring reports a month by bypassing the AR/AP team, via SageBridge, a governed read-only MCP server (12 tools, 9 .NET 8 projects) that lets executives self-serve ad-hoc finance and ops questions
- Answered broader ERP questions the canned reports never could — like which hotel clients we carry and their RMR, or when a given client's contract expires — onboarding 5 non-technical staff with skills in recurring use by 4 of them across finance, sales ops, and field service, by authoring 16 production Claude skills plus a Copilot Studio agent and an Office Scripts add-in covering ERP reporting, commission calculation, invoice reconciliation, and profit attribution
- Built a tiered prompt eval harness across 10 cases optimizing skill paragraphs and MCP tool descriptions at 3 prompt-detail levels, finding looser wording lifted accuracy 1.6x, sped up responses 2.2x, and cut tool calls 3x
- Built an AI-Agent that generates a vendor-specific parser from a sample invoice on human approval, letting non-engineers self-serve new vendor onboarding

Junior Web Developer — *Leon, Spain | July 2018 - Apr. 2021*
i4nm

- Architected and executed ERP migration from legacy system to cloud platform, developing Python REST API utility to transfer 150,000+ invoices with 100% data integrity

PROJECTS

saradm.com | Astro, TypeScript, Sanity, Cloudflare, R2, Resend — *Nov. 2025*

- Built a Cloudflare-hosted Astro portfolio with Sanity-managed content, Resend contact handling, and an Access-protected R2 video workflow; maintained 99.9% measured uptime while serving 1,100 monthly visitors

LiteLLM Gateway Deployment | LiteLLM, Python, Docker, AI-Agents, Observability — *Apr. 2026*

- Processing 110M tokens/week through production gateway with model fallback chains and budgeted virtual keys for 5 AI agents

HermesAgent Observability Fork | Python, Langfuse, AI-Agents, Open Source, Tracing — *Feb. 2026 - Mar. 2026*

- Designed decorator-based instrumentation with graceful degradation, enabling observability without coupling core agent codepaths to optional dependencies

ShellHacks 2025 | Express.js, PostgreSQL, Auth0, Full-Stack — *Sept. 2025*

- Led 4-person full-stack team to ship doctor-patient communications web-app in 28 hours, placing in 2nd round from 890+ project pool

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, PHP, SQL, Bash
Frontend & Frameworks: React, Astro, HTMX, Tailwind CSS
Backend & Database: Go, PostgreSQL, SQLite, Express.js, Nginx
DevOps & Infrastructure: Docker, AWS, GitHub Actions, Cloudflare, Vercel
